

#### **7.1.4 WATER CONSERVATION FACILITIES AVAILABLE IN THE INSTITUTION:**

- ❖ **Rain water harvesting**
- ❖ **Borewell /Open well recharge**
- ❖ **Waste water recycling**
- ❖ **Maintenance of water bodies and distribution system in the campus**

## **TESTING OF WATER FROM BORE WELL , TANKS AND WATER PURIFIERS**

In addition to the above-mentioned measures to conserve water, the college administration ensures the regular maintenance and repair of water taps, faucets, toilet flushes and water storage tanks in the college premises. The water storage tanks and drinking water purifiers are cleaned regularly. Students of the college carry out microbiological and chemical purity tests on the water from these coolers to ensure safe drinking water on campus. It helps them to put into practice the theory studied in the class, and instills in them an attitude of resource conservation and optimal usage. It also ensures timely checking and cleaning of these facilities. In order to apply classroom teaching to real life, students from the Departments of Chemistry carried out testing of the bore well water and water coolers to determine its safety and portability. This ensured timely checking and cleaning of these facilities.
