PROGRAM SPECIFIC OUTCOMES (PSOs)

Programme Specific Outcomes of Bachelor of Science (Non-Medical/ Computer Science)/ Honours

PSO 1: Scientific Knowledge and Application:

Develop a comprehensive understanding of foundational and advanced concepts in Physics, Chemistry, Mathematics, and Computer Science. Apply this knowledge to real-world problems and scientific investigations.

PSO 2: Problem-Solving Skills:

Employ critical thinking and mathematical reasoning to analyze scientific problems and implement appropriate solutions using theoretical and practical approaches.

PSO 3: Laboratory Proficiency:

Gain hands-on experience through well-structured laboratory courses that develop experimental, observational, analytical, and documentation skills.

PSO 4: Programming and Computational Skills:

Acquire skills in computer programming (e.g., in C language) and computational tools (e.g., Excel, data analysis software), preparing students for research, industry, or further studies in data and computer sciences.

PSO 5: Effective Communication:

Enhance communication skills through compulsory language courses, presentations, report writing, and collaborative project work.

PSO 6: Multidisciplinary Integration:

Learn to integrate knowledge across multiple disciplines such as literature, computer science, and chemistry, enabling a holistic educational experience.

PSO 7: Ethical and Social Responsibility:

Engage with Value-Added Courses (VAC) such as Moral Education, Gender Sensitization, and Environment Studies, instilling awareness of ethical, social, and environmental responsibilities.

PSO 8: Digital and Analytical Skills:

Use modern tools like Excel for statistical analysis and simulation, equipping students with workplace-ready digital skills.

Bachelor of Science (Semester System) (12+3+1 System of Education)
(Session-2026-27)

Bachelor of Science (SEMESTER-I)

Course Title: Physics (Electricity And Magnetism)

Course code: BSNL-1395 for Bachelor of Science (Non Medical)

BCSL-1395 for Bachelor of Science (Computer Science)

COURSE OUTCOMES:

After passing this course, students will be able to:

CO1: Understand vector calculus and vector algebra and its applications in electricity and magnetism. The students will be able to solve the electrostatic problems with the help of Gauss law and Coulomb's law.

CO2: understand the applications of scalar potential for the calculation of electric field and electric potential due to an arbitrary charge distribution.

CO3: They will be able to find the electric potential and electric field of various charge distributions with the help of methods of images. Students will understand the conduction of electric current in conductors by studying Ohm's law and equation of continuity.

CO4: They will be able to find the relationship between electric fields from two different inertial frames of reference. They will learn the origin of magnetism and properties of various kinds of magnetic materials.

**Bachelor of Science (Semester System) (12+3+1 System of Education)
(Session-2026-27)**

Bachelor of Science (SEMESTER-I)

Course Title: Physics (Electricity And Magnetism)

Course code: BSNL-1395 for Bachelor of Science (Non Medical)

BCSL-1395 for Bachelor of Science (Computer Science)

Credits: 4-0-0

Max Marks: 100 (ESE Marks: 70, CA: 30)

Examination Time: 3 Hours

Pass Mark: 25

Instructions for the Paper Setters:

Eight questions of equal marks (specified in the syllabus) are to be set, two in each of the four sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section. Each question carries 14 marks.

UNIT-I

Basic ideas of Vector Calculus Gradient, Divergence, curl and their physical significance. Laplacian in rectangular, cylindrical and spherical coordinates. Coulomb's Law for point charges and continuous distribution of charges. Electric field due to dipole, line charge and sheet of charge. Electric flux, Gauss's Law and its applications. Gauss's divergence theorem and differential form of Gauss's Law. Green's theorem.

UNIT-II

Work and potential difference. Potential difference as line integral of field. Electric potential due to a point charge, a group of point charges, dipole and quadrupole moments, long uniformly charged wire, charged disc. Stokes' Theorem and its applications in the Electrostatic field, $\text{curl } \mathbf{E} = 0$. Electric fields as gradient of scalar potential. Calculation of $\mathbf{E}$ due to a point charge and dipole from potential. Potential due to arbitrary charge distribution and multipole moments.

UNIT-III

Poisson and Laplace's equation and their solutions in Cartesian and spherical coordinates. Concept of electrical images. Calculation of electric potential and field due to a point charge placed near an infinitely conducting sheet. Current and current density, equation of continuity. Microscopic form of Ohm's Law ($\mathbf{J} = \sigma \mathbf{E}$) and conductivity, Failure of Ohm's Law.

UNIT-IV

Interaction between moving charges and force between parallel currents. Behaviour of various substances in the magnetic field. Definition of $\mathbf{M}$ and $\mathbf{H}$ and their relation to free and bound currents. Permeability and susceptibility and their interrelationship. Orbital motion of electrons and diamagnetism, Paramagnetism and Ferromagnetism, Maxwell's equations, boundary conditions, electromagnetic induction and applications.

Books Suggested:

1. Fundamentals of Electricity and Magnetism: Arthur F. Kipp.
2. Electricity and Magnetism, Berkeley Physics Course: Vol. II, E.M. Purcell.
3. Introduction to Classical Electrodynamics: David Griffith.
4. EM Waves and Radiating System: Edward C. Jordan and K.G. Balmain.
5. Fields and Waves Electromagnetic: David K. Cheng.

Bachelor of Science (Semester System) (12+3+1 System of Education)

SEMESTER-I

(Session-2026-27)

Course Title: Electricity and Magnetism Lab

Course Code: BSNP-1395 for Bachelor of Science (Non Medical)

BCSP-1395 for Bachelor of Science (Computer Science)

COURSE OUTCOMES:

After passing this course, students will be able to:

CO1: Students will demonstrate the ability to conduct a specific experiment from a given list, applying theoretical knowledge and practical skills to accurately complete the procedure and obtain reliable results.

CO2: Students will be able to articulate the theoretical background and principles underlying the chosen experiment.

CO3: Students will demonstrate their understanding of the experiment through oral questioning and discussion.

CO4: Students will maintain a well-organized and accurate practical file documenting all experiments conducted.

Bachelor of Science (Semester System) (12+3+1 System of Education)

SEMESTER-I

(Session-2026-27)

Course Title: Electricity and Magnetism Lab

Course code: BSNP-1395 for Bachelor of Science (Non Medical)

BCSP-1395 for Bachelor of Science (Computer Science)

Credits: 0-0-2

Max Marks: 50 (ESE Marks: 35, CA: 15)

Examination Time: 3 Hours

Pass Mark: 13

Instructions to Practical Examiner

Question paper is to be set on the spot jointly by the external and internal examiners. Two copies of the same to be submitted for the record to COE office, Kanya Maha Vidyalaya, Jalandhar

General Guidelines for Practical Examination

The distribution of marks is as follows :

i) One experiment 15 Marks

ii) Brief Theory 7 Marks

iii) Viva–Voce 7 Marks

iv) Record (Practical file) 6 Marks

II. There will be one session of 2 hours duration. The paper will have one session. Paper will consist of 8 experiments, out of which an examinee will mark 6 experiments and one of these is to be allotted by the external examiner.

III. The number of candidates in a group for practical examination should not exceed 12.

IV. In a single group, no experiment should be allotted to more than three examinees.

LIST OF EXPERIMENTS

1. To determine low resistance with Carey-Foster's Bridge.

2. To study the magnetic field produced by a current carrying solenoid using a search coil and calculate permeability of air.

3. To study the induced e.m.f. as a function of the velocity of the magnet.

4. Study of phase relationships using impedance triangle for LCR circuit and calculate impedance.

5. Resonance in a series LCR circuits for different R–value and calculate Q–value.

6. Resonance in parallel LCR circuits for different R-value and calculate Q-value.

7. Capacitance by flashing and quenching a neon lamp.

8. To compare capacitance of two capacitors by de–Sauty's bridge.

9. To determine L using Anderson Bridge.

10. To find the value of BH, the horizontal component of earth's magnetic field in the lab using a deflection & vibration magnetometer.

11. To study the variation of the magnetic field with distance along the axis of a coil carrying current by plotting a graph.

Bachelor of Science (Semester System) (12+3+1 System of Education)

SEMESTER-II

(Session-2026-27)

Course code: BSNL-2395 for Bachelor of Science (Non-Medical)

BCSL-2395 for Bachelor of Science (Computer Science)

COURSE TITLE: PHYSICS (MECHANICS)

COURSE OUTCOMES:

After passing this course,

CO1: Students will master the principles of classical mechanics, including coordinate systems, conservation laws, central forces, Kepler's laws, inertial and non-inertial frames, Coriolis force, collisions, rigid body dynamics, and gyroscopic motion, equipping them to solve complex physical problems and analyze real-world applications.

CO2: Students will understand the fundamentals of special relativity, including Newtonian relativity, Galilean and Lorentz transformations, relativistic effects like time dilation, length contraction, and velocity addition, as well as key experiments such as Michelson-Morley and Fizeau's. They will also explore mass-energy equivalence, relativistic momentum, energy transformations, and phenomena like starlight aberration and the Doppler effect, enabling them to analyze the principles governing modern physics.

CO3: Students will understand the principles of simple harmonic motion (SHM), energy of an SHO, and oscillatory systems like compound and torsional pendulums. They will analyze electrical and transverse vibrations, the superposition of SHMs, and the effects of damping, including the determination of damping coefficient, relaxation time, logarithmic decrement, and Q-factor, enabling them to solve real-world vibration and oscillation problems.

CO4: Students will understand the dynamics of forced mechanical and electrical oscillators, resonance, and energy variations with frequency. They will analyze coupled oscillators, normal modes, wave equations, and wave behavior at boundaries, including reflection, transmission, and impedance matching. Additionally, they will explore standing waves, energy of vibrating strings, and wave and group velocity, equipping them with the skills to solve advanced wave and oscillation problems.

Bachelor of Science (Semester System) (12+3+1 System of Education)

SEMESTER-II

(Session-2026-27)

Course code: BSNL-2395 for Bachelor of Science (Non-Medical)

BCSL-2395 for Bachelor of Science (Computer Science)

COURSE TITLE: PHYSICS (MECHANICS)

Credits: 4-0-0

Max Marks: 100 (ESE Marks: 70, CA: 30)

Examination Time: 3 Hours

Pass Mark: 25

Instructions for the Paper Setters:

Eight questions of equal marks are to be set, two in each of the four Sections (A-D). Questions of Sections, A-D should be set from Units I-IV of the syllabus respectively. Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each section. The fifth question may be attempted from any Section. Each question carries 14 marks.

Note: Students can use Non-Scientific calculators or logarithmic tables.

UNIT- I

Co-ordinate Systems and Motion of a particle: Reference frames, Displacement, velocity & acceleration in Cartesian, Plane polar, Spherical & Cylindrical coordinate systems, Solid angle, Forces in nature (Qualitative), Conservative forces, Central Forces, Motion of a particle under a central force field, Two-body problem and its reduction to one-body problem and its solution, Reduced mass, Equation of motion of a reduced mass under central force and energy, Differential equation of the orbit, Equation of orbit under inverse square force field, Turning points, Kepler's Laws, Satellite in circular orbit and applications, Geo-synchronous orbits, Weightlessness.

Lectures 15

UNIT-II

Fundamentals of Dynamics: Momentum of variable-mass system: motion of rocket, Dynamics of a system of particles: internal & external forces and momentum conservation, Centre of Mass, Impulse.

Inertial & Non-Inertial Systems: Inertial frames, non-inertial frames, Galilean transformations, Galilean invariance of space & time intervals, Fictitious forces in non-inertial frames having translational and uniform rotational motion, Laws of Physics in rotating coordinate systems, Centrifugal force, Effect of rotation of earth on acceleration due to gravity, Effect of Coriolis force on a particle falling freely under gravity, Effect of Coriolis force on a particle moving on the surface of Earth, Foucault's pendulum and its equation of motion.

Lectures 15

UNIT-III

Collisions: Elastic and inelastic collisions between particles, Relationship of velocities, angles and energies of the colliding particles in Centre of Mass and Laboratory frames, Rutherford scattering.

Rotational Dynamics: Moment of Inertia, Moment of inertia of a rigid body, Motion involving both translation and rotation, Principle of conservation of angular momentum, Kinetic energy of rotation, Theorems of parallel and perpendicular axes, Rotational motion of a rigid body in general, Angular momentum and kinetic energy of a rigid body about principal axes, Euler's equations, Precession and Elementary Gyroscope, Motion of a spinning top.

Lectures 15

UNIT-IV

Special Theory of Relativity: Concept of Ether and Michelson–Morley experiment, Postulates of special theory of relativity, Lorentz transformations, observer and viewer in relativity. Relativity of simultaneity, Length contraction, synchronization and time dilation, Einstein's velocity addition rule, Relativistic Doppler effect, Variation of mass with velocity, mass–energy equivalence, Rest mass in an inelastic collision, Relativistic momentum & energy and their transformation, Transformations of force, Concepts of Minkowski space, Four vector formulation.

Lectures 15

Books Suggested:-

1. Mechanics, Berkeley Vol.-I, C. Kittle.
2. Mechanics, H.S. Hans & S.P. Puri
3. Introduction to Relativity, Robert Resnick
4. Special Relativity by A. P. French
5. Fundamentals of Vibrations and Waves: S.P. Puri.
6. Physics of Vibrations and Waves: H. J. Pain
7. Vibrations and Wave by A. P. French

COURSE TITLE: Mechanics Lab

Course code: BSNP-2395 for Bachelor of Science (Non Medical)
BCSP-2395 for Bachelor of Science (Computer Science)

COURSE OUTCOMES:

After passing this course, students will be able to:

CO1: Students will demonstrate the ability to conduct a specific experiment from a given list, applying theoretical knowledge and practical skills to accurately complete the procedure and obtain reliable results.

CO2: Students will be able to articulate the theoretical background and principles underlying the chosen experiment.

CO3: Students will demonstrate their understanding of the experiment through oral questioning and discussion.

CO4: Students will maintain a well-organized and accurate practical file documenting all experiments conducted.

Bachelor of Science (Semester System) (12+3+1 System of Education)

SEMESTER-II

(Session-2026-27)

COURSE TITLE: Mechanics Lab

Course code: BSNP-2395 for Bachelor of Science (Non Medical)
BCSP-2395 for Bachelor of Science (Computer Science)

Credits: 0-0-2

Examination Time: 3 Hours

Max Marks: 50 (ESE Marks: 35, CA: 15)

Pass Mark: 13

Instructions to Practical Examiner

Question paper is to be set on the spot jointly by the external and internal examiners. Two copies of the same to be submitted for the record to COE office, Kanya Maha Vidyalaya, Jalandhar

General Guidelines for Practical Examination

The distribution of marks is as follows :

i) One experiment 15 Marks

ii) Brief Theory 7 Marks

iii) Viva–Voce 7 Marks

iv) Record (Practical file) 6 Marks

II. There will be one session of 2 hours duration. The paper will have one session. Paper will consist of 8 experiments, out of which an examinee will mark 6 experiments and one of these is to be allotted by the external examiner.

III. The number of candidates in a group for practical examination should not exceed 12.

IV. In a single group, no experiment should be allotted to more than three examinees.

LIST OF EXPERIMENTS

1. To study the dependence of moment of inertia on distribution of mass (by noting time periods of oscillations using objects of various geometrical shapes but of same mass).

2. To establish a relationship between torque and angular acceleration using a flywheel.

3. To find the moment of inertia of a flywheel.

4. Study of bending of beams and determination of Young's modulus.

5. Determination of Poisson's ratio for rubber.

6. To determine energy transfer, coefficient of restitution and verify laws of conservation of linear momentum and kinetic energy in elastic collisions using one dimensional collisions of hanging spheres.

7. To verify the laws of vibrating strings by Melde's experiment.

8. Measure time period as a function of distance of center of suspension (oscillation) from center of mass, plot relevant graphs, determine radius of gyration and acceleration due to gravity.

9. Find the value of 'g' by Kater's pendulum.

10. Measure time period of oscillation of a Maxwell needle and determine modulus of rigidity of the material of a given wire.

11. To measure logarithmic decrement, coefficient of damping, relaxation time, and quality factor of a damped simple pendulum.

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-III

(Session-2026-27)

PHYSICS (STATISTICAL PHYSICS AND THERMODYNAMICS)

Course code: BSNM-3395 (I) for Bachelor of Science (Non Medical)

BCSM-3395 (I) for Bachelor of Science (Computer Science)

COURSE OUTCOMES:

After passing this course, students will be able to:

CO1: Understand and explain the foundational concepts of statistical physics, including microstates, macrostates, thermodynamic probability, and equilibrium in systems of distinguishable particles.

CO2: Apply the principles of classical and quantum statistics, including Maxwell-Boltzmann (MB), Bose-Einstein (BE), and Fermi-Dirac (FD) statistics, to analyze the behavior of ideal gases and radiation.

CO3: Evaluate the concept of entropy from a statistical viewpoint and describe its implications for reversible and irreversible processes, including applications to thermodynamic systems such as the Carnot cycle.

CO4: Analyze and derive Maxwell's thermodynamic relations, explain the Joule-Thomson effect, and understand thermodynamic processes like adiabatic expansion and compression.

Bachelor of Science (Semester System) (12+3 System of Education)
SEMESTER-III
(Session-2026-27)
PHYSICS (STATISTICAL PHYSICS AND THERMODYNAMICS)
Course code: BSNL-3395 for Bachelor of Science (Non Medical)
BCSL-3395 for Bachelor of Science (Computer Science)

Credits: 4-0-0

Max Marks: 100 (ESE Marks: 70, CA: 30)

Examination Time: 3 Hours

Pass Mark: 25

Instructions for the Paper Setters:

Eight questions of equal marks (specified in the syllabus) are to be set, two in each of the four sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section. Each question carries 14 marks.

Note: Students can use Non-Scientific calculators or logarithmic tables.

UNIT-I

Basic ideas of Statistical Physics, Scope of Statistical Physics, Basic ideas about probability, Distribution of four distinguishable particles into compartments of equal size. Concept of macro states, microstates, Thermodynamic Probability, Effects of constraints on the system. Distribution of particles in two compartments, Deviation from the state of maximum probability. Equilibrium state of dynamic system, Distribution of distinguishable n particles in k compartments of unequal sizes.

UNIT-II

Phase space and division into elementary cells. Three kinds of statistics. The basic approach in three statistics. Maxwell Boltzmann (MB) statistics applied to an ideal gas in equilibrium. Experimental verification of the law of distribution of molecular speeds. Need for Quantum Statistics – B.E. Statement of Planck's law of Radiation Wien's Displacement and Stefan's law. Fermi Dirac (FD) statistics. Comparison of M.B, B.E and F.D statistics.

UNIT-III

Statistical definition of entropy, Change of entropy of system, additive nature of entropy, Law of increase of entropy, Reversible and irreversible processes, and their examples, work done in reversible process, examples of increase in entropy in natural processes, entropy and disorder, Brief review of Terms, Laws of Thermodynamics, Carnot Cycle, Entropy changes in Carnot cycle, Applications of thermodynamics to thermoelectric effect, change of entropy along reversible path in P-V diagram. Heat death of universe.

UNIT-IV

Derivation of Maxwell Thermodynamics relations, Cooling produced by adiabatic stretching, Adiabatic Compression, change of internal energy with volume, Specific heat at constant pressure and constant volume, Joule-Thomson effect, Expression for $C_p - C_v$, Change of state and Clapeyron equation.

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-III

(Session-2026-27)

Course code: BSNP-3395 for Bachelor of Science (Non Medical)

BCSP-3395 for Bachelor of Science (Computer Science)

OPTICS LAB

COURSE OUTCOMES:

After passing this course, students will be able to:

CO1: Demonstrate the ability to set up and conduct optical experiments such as determining the refractive index, Cauchy's constants, and wavelength of light using instruments like the spectrometer, Newton's rings, and diffraction gratings.

CO2: Analyze and interpret interference and diffraction patterns to determine key physical parameters such as wavelength, dispersive power, and resolving power of optical instruments.

CO3: Apply geometrical optics principles to measure accessible and inaccessible heights using a sextant, reinforcing practical understanding of angular measurement techniques.

CO4: Understand and verify statistical principles through experiments like the coin toss, and apply Young's double-slit experiment to study wave nature of light and laser wavelength determination.

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-III

OPTICS LAB

(PRACTICAL)

(Session-2026-27)

Course code: BSNM-3395(P) for Bachelor of Science (Non Medical)

BCSM-3395(P) for Bachelor of Science (Computer Science)

Credits: 0-0-2

Max Marks: 50 (ESE Marks: 35, CA: 15)

Examination Time: 3 Hours

Pass Mark: 13

Instructions to Practical Examiner

Question paper is to be set on the spot jointly by the external and internal examiners. Two copies of the same to be submitted for the record to COE office, Kanya Maha Vidyalaya, Jalandhar

General Guidelines for Practical Examination

The distribution of marks is as follows :

i) One experiment 15 Marks

ii) Brief Theory 7 Marks

iii) Viva–Voce 7 Marks

iv) Record (Practical file) 6 Marks

II. There will be one session of 2 hours duration. The paper will have one session. Paper will consist of 8 experiments, out of which an examinee will mark 6 experiments and one of these is to be allotted by the external examiner.

III. The number of candidates in a group for practical examination should not exceed 12.

IV. In a single group, no experiment should be allotted to more than three examinees.

List of Experiments

1. To determine the refractive index of glass/ liquid using a spectrometer.
2. To determine the Cauchy's constants.
3. To study the refractive index of a doubly refracting prism.
4. To set up Newton's rings to determine wavelength of sodium light.
5. To determine the wavelength by using plane diffraction grating (Use Hg source)
6. To determine dispersive power of plane diffraction grating.
7. To determine resolving power of a telescope.
8. To determine resolving power of a grating.
9. To measure an accessible (Horizontal and vertical) height using sextant.
10. To measure inaccessible height by using sextant.
11. Verify laws of probability distribution by throwing similar coins.
12. To determine the wavelength of given laser source using Young's double slit experiment

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-IV

PHYSICS (QUANTUM PHYSICS)

(Session-2026-27)

Course code: BSNL-4395 for Bachelor of Science (Non Medical)

BCSL-4395 for Bachelor of Science (Computer Science)

COURSE OUTCOMES:

After passing this course, students will be able to:

CO1: Understand and explain the fundamental principles leading to the development of quantum mechanics, including wave-particle duality, the De Broglie hypothesis, uncertainty principle, and the photoelectric and Compton effects.

CO2: Apply the operator formalism in quantum mechanics to calculate expectation values, understand the Ehrenfest theorem, and work with Hermitian operators, eigenfunctions, and eigenvalues.

CO3: Solve one-dimensional quantum mechanical problems using the Schrödinger equation, such as step potentials, potential barriers, and particle in a box, and explain phenomena like quantum tunneling.

CO4: Analyze three-dimensional quantum systems, including the particle in a 3D box, the 3D harmonic oscillator, and the hydrogen atom, using Cartesian and spherical coordinate solutions of the Schrödinger equation.

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-IV

(Session-2026-27)

PHYSICS (QUANTUM PHYSICS)

Course code: BSNL-4395 for Bachelor of Science (Non Medical)

BCSL-4395 for Bachelor of Science (Computer Science)

Credits: 4-0-0

Max Marks: 100 (ESE Marks: 70, CA: 30)

Examination Time: 3 Hours

Pass Mark: 25

Instructions for the Paper Setters:

Eight questions of equal marks (specified in the syllabus) are to be set, two in each of the four sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section. Each question carries 14 marks.

Note: Students can use Non-Scientific calculators or logarithmic tables.

UNIT-I

Formalism of Wave Mechanics:

Brief introduction to need and development of quantum mechanics, photoelectric effect, Compton effect, Wave particle duality, De broglie hypothesis, Uncertainty principle, Gaussian wave packet, Operator correspondence, Normalization and probability interpretation of wave function, Superposition principle.

UNIT-II

Expectation value, Probability current and conservation of probability, Admissibility conditions of wave function, Ehrenfest theorem, Eigen function and Eigen value, Operator formalism, orthogonal system, expansion in eigen functions, Hermitian operator, simultaneous eigen function, equation of motion.

UNIT-III

Application of Schrodinger wave equation to one dimensional problems: Fundamental postulates of wave mechanics, Schrodinger's wave equation for a free particle and equation of a particle subject to forces. One dimensional step potential for $E > V_0$, one dimensional step potential for $0 < E < V_0$, one dimensional potential barrier of finite height and width, Quantum mechanical tunnelling effect, particle in one dimensional box with infinitely hard walls, one dimensional square well of finite depth

UNIT-IV

Application of Schrodinger equation to three dimensional problems:

Free particle in three dimensional rectangular box, Eigen wave function, Eigenvalues of momentum, energy and degeneracy, three dimensional harmonic oscillator (Cartesian coordinates) wave function, energy levels, degeneracy, Schrodinger's wave equation in spherical polar coordinates, Schrodinger wave equation for spherically symmetric potential for hydrogen atom, wave function of H atom, solution of $R(r), \Theta(\theta), \Phi(\varphi)$ equations.

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-IV

(Session-2026-27)

Course Title: THERMAL & MODERN PHYSICS LAB (PRACTICAL)

Course code: BSNP-4395 for Bachelor of Science (Non Medical)

BCSP-4395 for Bachelor of Science (Computer Science)

COURSE OUTCOMES:

After passing this course, students will be able to:

CO1: Perform and analyze thermal experiments to determine physical properties such as thermal conductivity, adiabatic expansion, and heating efficiency, using methods like Lee's method and controlled electric heating.

CO2: Investigate thermoelectric and optical phenomena by plotting the calibration curve of a thermocouple, studying the absorption spectra of iodine vapors, and analyzing the inverse square law using a photovoltaic cell.

CO3: Explore the principles of quantum physics by conducting experiments related to the photoelectric effect, determining Planck's constant, and measuring the ionization potential of mercury.

CO4: Demonstrate understanding of polarization and optical activity by using a polarimeter to measure the rotation of the plane of polarization and determine the specific rotation of sugar.

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-IV

(Session-2026-27)

THERMAL & MODERN PHYSICS LAB (PRACTICAL)

Course code: BSNP-4395 for Bachelor of Science (Non Medical)

BCSP-4395 for Bachelor of Science (Computer Science)

Credits: 0-0-2

Max Marks: 50 (ESE Marks: 35, CA: 15)

Examination Time: 3 Hours

Pass Mark: 13

Instructions to Practical Examiner

Question paper is to be set on the spot jointly by the external and internal examiners. Two copies of the same to be submitted for the record to COE office, Kanya Maha Vidyalaya, Jalandhar

General Guidelines for Practical Examination

The distribution of marks is as follows :

i) One experiment 15 Marks

ii) Brief Theory 7 Marks

iii) Viva-Voce 7 Marks

iv) Record (Practical file) 6 Marks

II. There will be one session of 2 hours duration. The paper will have one session. Paper will consist of 8 experiments, out of which an examinee will mark 6 experiments and one of these is to be allotted by the external examiner.

III. The number of candidates in a group for practical examination should not exceed 12.

IV. In a single group, no experiment should be allotted to more than three examinees.

List of Experiments

1. To study adiabatic expansion of gas and hence to calculate the value of Volume.
2. To find the coefficient of Thermal Conductivity of a bad conductor by Lee's method.
3. To plot a calibration curve of a given thermocouple (copper constantan) using a potentiometer.
4. To study the photoelectric effect and determine the value of Planck's constant.
5. To determine the ionization potential of mercury.
6. Study of variation of light intensity with distance using photovoltaic cell (Inverse Square Law)
7. To determine the heating efficiency of an electric kettle with varying voltage.
8. To study the absorption spectra of iodine vapours.
9. To study the rotation of the plane of polarization by using a polarimeter.
10. To determine the specific rotation of sugar using Laurent's half shade polarimeter
11. To study the characterizations of Photovoltaic cells.

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-IV

(Session-2026-27)

Course code: BSNM-4390 for Bachelor of Science (Non Medical)

BCSM-4390 for Bachelor of Science (Computer Science)

APPLIED OPTICS

PHYSICS SKILL ENHANCEMENT COURSE (SEC-1)

COURSE OUTCOMES:

After passing this course, students will be able to:

CO1: Understand and analyze the principles of interference of light, including the formation of interference patterns using Young's double slit, Fresnel biprism, thin films, Newton's rings, and interferometers such as Michelson, Fabry-Perot, and Mach-Zehnder.

CO2: Apply Fresnel and Fraunhofer diffraction theory to analyze diffraction patterns through rectangular and circular apertures, and evaluate the resolving power of optical instruments like telescopes, microscopes, and diffraction gratings.

CO3: Demonstrate understanding of light polarization through various phenomena including reflection, double refraction, and use of Nicol prisms and retardation plates, and analyze the production and analysis of polarized light using optical devices.

CO4: Explain the working principles of lasers by understanding stimulated emission, Einstein coefficients, population inversion, laser types (e.g., Ruby, Nd:YAG, He-Ne, CO₂), and their applications in holography and optical fiber communication.

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-IV

(Session-2026-27)

Course code: BSNM-4390 for Bachelor of Science (Non Medical)

BCSM-4390 for Bachelor of Science (Computer Science)

APPLIED OPTICS

PHYSICS SKILL ENHANCEMENT COURSE (SEC-1)

Credits: 3-0-0

Max Marks: 100 (ESE Marks: 70, CA: 30)

Examination Time: 3 Hours

Pass Mark: 25

Instructions for the Paper Setters:

Eight questions of equal marks (specified in the syllabus) are to be set, two in each of the four sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section. Each question carries 14 marks.

Note: Students can use Non-Scientific calculators or logarithmic tables.

UNIT-I

Interference of Light:

Superposition of light waves and interference, Young's double slit experiment, Conditions for sustained interference pattern, Coherent sources of light, spatial and temporal coherence Interference pattern by division of wave front, Fresnel Biprism, Displacement of fringes, Change of phase on reflection, Interference in thin films due to reflected and transmitted light, Newton's Rings. Michelson Interferometer, Fabry Perot and Mach Zehnder Interferometer.

UNIT-II

Diffraction:

Fresnel theory of diffraction, half-period zones, Zone plate, Distinction between Fresnel and Fraunhofer diffraction. Fraunhofer diffraction at rectangular and circular apertures, Resolving power of telescope in diffraction grating, its use as a spectroscopic element and its resolving power, Resolving power of microscope

UNIT-III

Polarization:

Plane Polarized light, Elliptically polarized light, wire grid polarizer, Sheet polarizer, Malus' Law, Brewster Law, Polarization by reflection and scattering, Double reflection, Nicol prism, Retardation plates, Production and Analysis of polarized light, Quarter and half wave plates.

UNIT-IV

Laser Fundamentals:

Derivation of Einstein relations, Concept of stimulated emission and population inversion, broadening of spectral lines, three level and four level laser schemes, elementary theory of optical cavity, longitudinal and transverse modes, Components of laser devices, condition for laser action, types of lasers, (Ruby and Nd:YAG lasers, He-Ne and CO₂ lasers) construction, mode of creating population inversion and output characteristics, application of lasers –a general outline. Holography and its applications, Optical fibres, design, basic principle, numerical aperture, applications of fibres in optical communication.

Text Reference Books:

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-V

(Session-2026-27)

PHYSICS (SOLID STATE PHYSICS & ELECTRONICS)

Course code: BSNL-5395 for Bachelor of Science (Non Medical)

BCSL-5395 for Bachelor of Science (Computer Science)

Credits: 4-0-0

Max Marks: 100 (ESE Marks: 70, CA: 30)

Examination Time: 3 Hours

Pass Mark: 25

Instructions for the Paper Setters:

Eight questions of equal marks (specified in the syllabus) are to be set, two in each of the four sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section. Each question carries 14 marks.

Note: Students can use Non-Scientific calculators or logarithmic tables.

Unit - I

Crystal structure, symmetry operations for a two and three dimensional crystal, two-dimensional Bravais lattices, three dimensional Bravais lattices, basic primitive cells, crystal planes and miller indices, diamond and NaCl structure, Crystal Diffraction: Bragg's law, Experimental methods for crystal structure studies, Laue equations, reciprocal lattices of SC, BCC and FCC, Bragg's law in reciprocal lattice, Brillouin zones and their construction in two and three dimensions, structure factor and atomic form factor. **Lectures 15**

Unit- II

Lattice vibrations, concepts of phonons, scattering of photons by phonons, vibration and mono- atomic, linear chains, density of modes, Einstein and Debye models of specific heat. Free electron model of metals, Free electron, Fermi gas and Fermi energy, band Theory: Kronig-Penney model, metals and insulators, qualitative discussion of the following: conductivity and its variation with temperature in semiconductors, Fermi levels in intrinsic and extrinsic semiconductors, band gap in semiconductors. **Lectures 15**

Unit- III

Concepts of current and voltage sources, p-n junction, biasing of diode, V-I characteristics, rectification: half wave, full wave rectifiers and bridge rectifiers, efficiency, ripple factor, qualitative ideas of filter circuits (LC and π filters), Zener diode and voltage regulation, introduction to Photonic devices (solar cell, photodiode and LED). Basic concepts of Boolean algebra, AND OR NOT and NAND Gates. Junction transistor : structure and working relation between different currents in transistors, sign conventions, amplifying action, different configurations of a transistor and their comparison, CB and CE characteristics, structure and characteristics of JFET, transistor biasing and stabilization of operating point. **Lectures 15**

Unit IV

Working of CE amplifier, amplifier analysis using h-parameters, equivalent circuits, determination of current gain, power gain, input impedance, FET amplifier and its voltage gain, feedback in amplifiers, different types, voltage gain, advantage of negative feedback, emitter follower as negative feedback circuit. Barkhausen criterion of sustained oscillations, LC oscillator (tuned collector, tuned base Hartley), RC oscillators, phase shift and Wein bridge. **Lectures 15**

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-V

(Session-2026-27)

PHYSICS (PHYSICS ELECTRONICS LAB (PRACTICAL)

Course code: BSNP-5395 for Bachelor of Science (Non Medical)

BCSP-5395 for Bachelor of Science (Computer Science)

Credits: 0-0-2

Max Marks: 50 (ESE Marks: 35, CA: 15)

Examination Time: 3 Hours

Pass Mark: 13

Instructions to Practical Examiner

Question paper is to be set on the spot jointly by the external and internal examiners. Two copies of the same to be submitted for the record to COE office, Kanya Maha Vidyalaya, Jalandhar

General Guidelines for Practical Examination:

I. The distribution of marks is as follows :

(i) One experiment 10 Marks

(ii) Brief Theory 5 Marks

(iii) Viva-Voce 5 Marks

(iv) Record (Practical file) 5 Marks

II. There will be one sessions of 2 hours duration. The paper will have one session. Paper will consist of 8 experiments out of which an examinee will mark 6 experiments and one of these is to be allotted by the external examiner.

III. Number of candidates in a group for practical examination should not exceed 12.

IV. In a single group no experiment be allotted to more than three examinee in any group.

1. Measurement of reverse saturation current in p-n-junction diode at various temperatures and to find the approximate value of energy gap.
2. To draw forward and reverse bias characteristics of a p-n junction diode.
3. Study of a diode as a clipping element.
4. To measure the efficiency and ripple factors for (a) halfwave (b) full wave and (c) bridge rectifier circuits.
5. To draw the characteristics of a Zener diode.
6. To study characteristics of Common Base transistor.
7. To study characteristics of Common Emitter transistor.
8. To study the gain of an amplifier at different frequencies and to find Band width
9. To study the reduction in the ripple in the rectified output with RC, LC and π filters.
10. To study logic gates (OR, AND, NOT and NAND).

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-V

(Session-2026-27)

PHYSICS (INTERNSHIP (02 WEEKS))

Course code: BSNP-5396 for Bachelor of Science (Non Medical)

BCSP-5396 for Bachelor of Science (Computer Science)

Credits: 0-0-2

Max Marks: 50 (ESE Marks: 50)

Examination Time: 3 Hours

Pass Mark: 18

Students will undergo training / Internship for a period of 2 weeks in academic institutes/ industries.

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER–VI

(Session-2026-27)

PHYSICS (NUCLEAR PHYSICS)

Course code: BSNL-6395 for Bachelor of Science (Non Medical)

BCSL-6395 for Bachelor of Science (Computer Science)

Credits: 4-0-0

Max Marks: 100 (ESE Marks: 70, CA: 30)

Examination Time: 3 Hours

Pass Mark: 25

Instructions for the Paper Setters:

Eight questions of equal marks (specified in the syllabus) are to be set, two in each of the four sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section. Each question carries 14 marks.

Note: Students can use Non-Scientific calculators or logarithmic tables.

Unit- I

Nuclear Properties: Constituents of nucleus, non-existence of electrons in nucleus, nuclear mass and binding energy, features of binding energy versus mass number curve, nucleus radius, angular momentum and parity, nuclear moments: magnetic dipole moment and electric quadrupole moment, properties of nuclear forces, Yukawa theory.

Lectures 15

Unit-II

Radioactive Decays: Modes of decay of radioactive nuclides and decay Laws, radioactive series and displacement law, radioactive dating, constituents of Cosmic rays, Alpha decay: Gamow's theory of alpha decay, barrier penetration as applied to alpha decay, Geiger Nuttal law, Beta decays: β^- , β^+ and electron capture decays, Neutrino hypothesis and its detection, parity violation in β decay, Gamma transitions: Excited levels, isomeric levels, Gamma transitions, internal conversion.

Lectures 15

Unit-III

Nuclear Reactions: Types of nuclear reactions, reactions cross section, conservation laws, Kinematics of nuclear reaction, examples of nuclear reactions, Q-value and its physical significance, compound nucleus, level width.

Lectures 15

Unit- IV

Nuclear Models: Liquid drop model, semi-empirical mass formula, condition of stability, evidence for nuclear magic numbers, Shell Model, energy level scheme, angular momenta of nuclear ground states, parity and magnetic moment of nuclear ground states.

Lectures 15

Bachelor of Science (Semester System) (12+3 System of Education)

SEMESTER-V

(Session-2026-27)

PHYSICS (NUCLEAR PHYSICS & MATERIALS LAB)

Course code: BSNP-6395 for Bachelor of Science (Non Medical)

BCSP-6395 for Bachelor of Science (Computer Science)

Credits: 0-0-2

Max Marks: 50 (ESE Marks: 35, CA: 15)

Examination Time: 3 Hours

Pass Mark: 13

Instructions to Practical Examiner

Question paper is to be set on the spot jointly by the external and internal examiners. Two copies of the same to be submitted for the record to COE office, Kanya Maha Vidyalaya, Jalandhar

General Guidelines for Practical Examination:

I. The distribution of marks is as follows :

(i) One experiment 10 Marks

(ii) Brief Theory 5 Marks

(iii) Viva-Voce 5 Marks

(iv) Record (Practical file) 5 Marks

II. There will be one sessions of 2 hours duration. The paper will have one session. Paper will consist of 8 experiments out of which an examinee will mark 6 experiments and one of these is to be allotted by the external examiner.

III. Number of candidates in a group for practical examination should not exceed 12.

IV. In a single group no experiment be allotted to more than three examinee in any group.

List of Experiments

1. To trace the B-H curves for different materials using CRO and find the magnetic parameters from these

2. To study the stabilization of output voltage of a power supply with Zener diode.

3. To draw output and mutual characteristics of an FET (Experiments) and determine its parameters. 4. To set up an oscillator and to study its output on CRO.

5. To draw the plateau of a GM counter and find its dead time.

6. To study the statistical fluctuations using GM counter.

7. To study the absorption of beta particles in aluminium using GM counter and determine the absorption coefficient of beta particles from it.

8. To study the characteristics of a thermistor and find its parameters.

9. To study the response of RC circuit to various input voltage (square, sine and triangular).
